Lars Arge. "The Buffer Tree: A Technique for Designing Batched External Data Structures."
Algorithmica, 37(1):1-24, 2003.

Guide

- ◆ Summary Buffer Tree
- ◆ Software Platform & Design
 - ◆ Software Design and Tree Representation
 - ◆ Tree Representation in External Memory
 - ◆ Implementation Details
- ◆ Evaluation
- ◆ Notes

Buffer Tree Data Structure

- ◆ Modified (a, b)-tree
 - ◆ Node fan-out is between $m/4$ and m
 - ◆ $O(N)$ Leaves store each at most B elements
- ◆ Nodes are each associated with an operation buffer
- ◆ Tree operations are inserted into the operation buffer and processed in batches
- ◆ Operations are evaluated at the leaf level

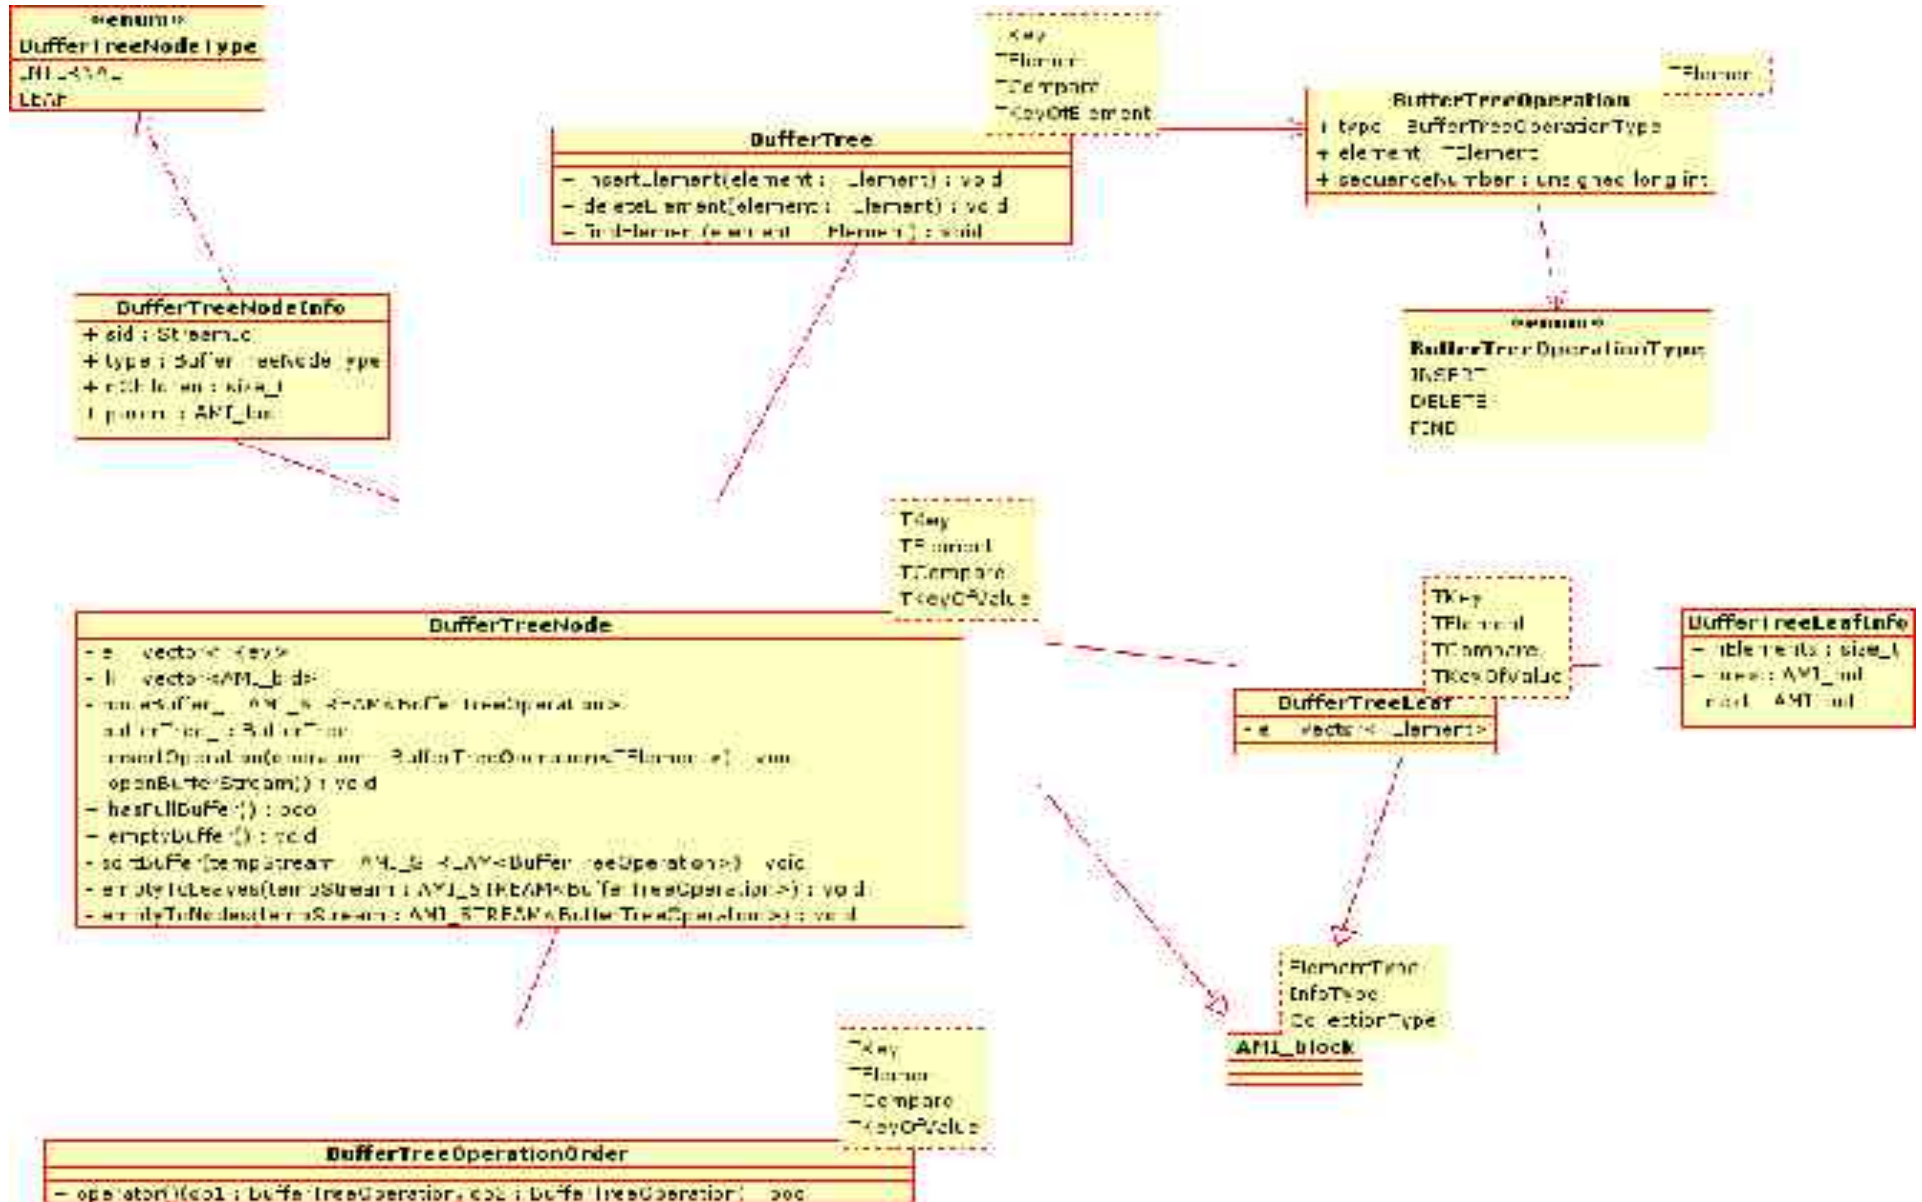

Guide

- ◆ Summary Buffer Tree
- ◆ Software Platform & Design
 - ◆ Software Design and Tree Representation
 - ◆ Tree Representation in External Memory
 - ◆ Implementation Details
- ◆ Evaluation
- ◆ Notes

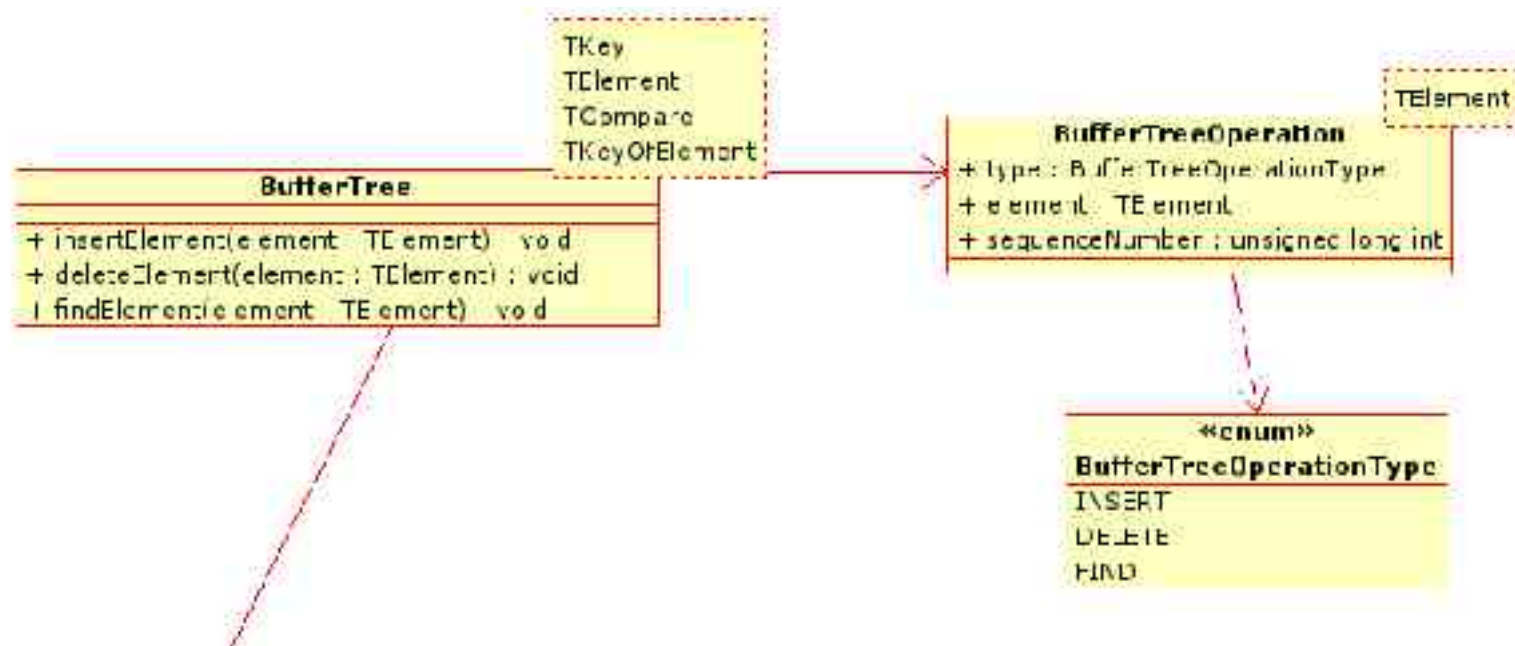

Platform

- ◆ C++ using TPIE library and STL
- ◆ Shared library (no stand-alone program)
- ◆ Type independent
- ◆ All TPIE supported hardware and software platforms

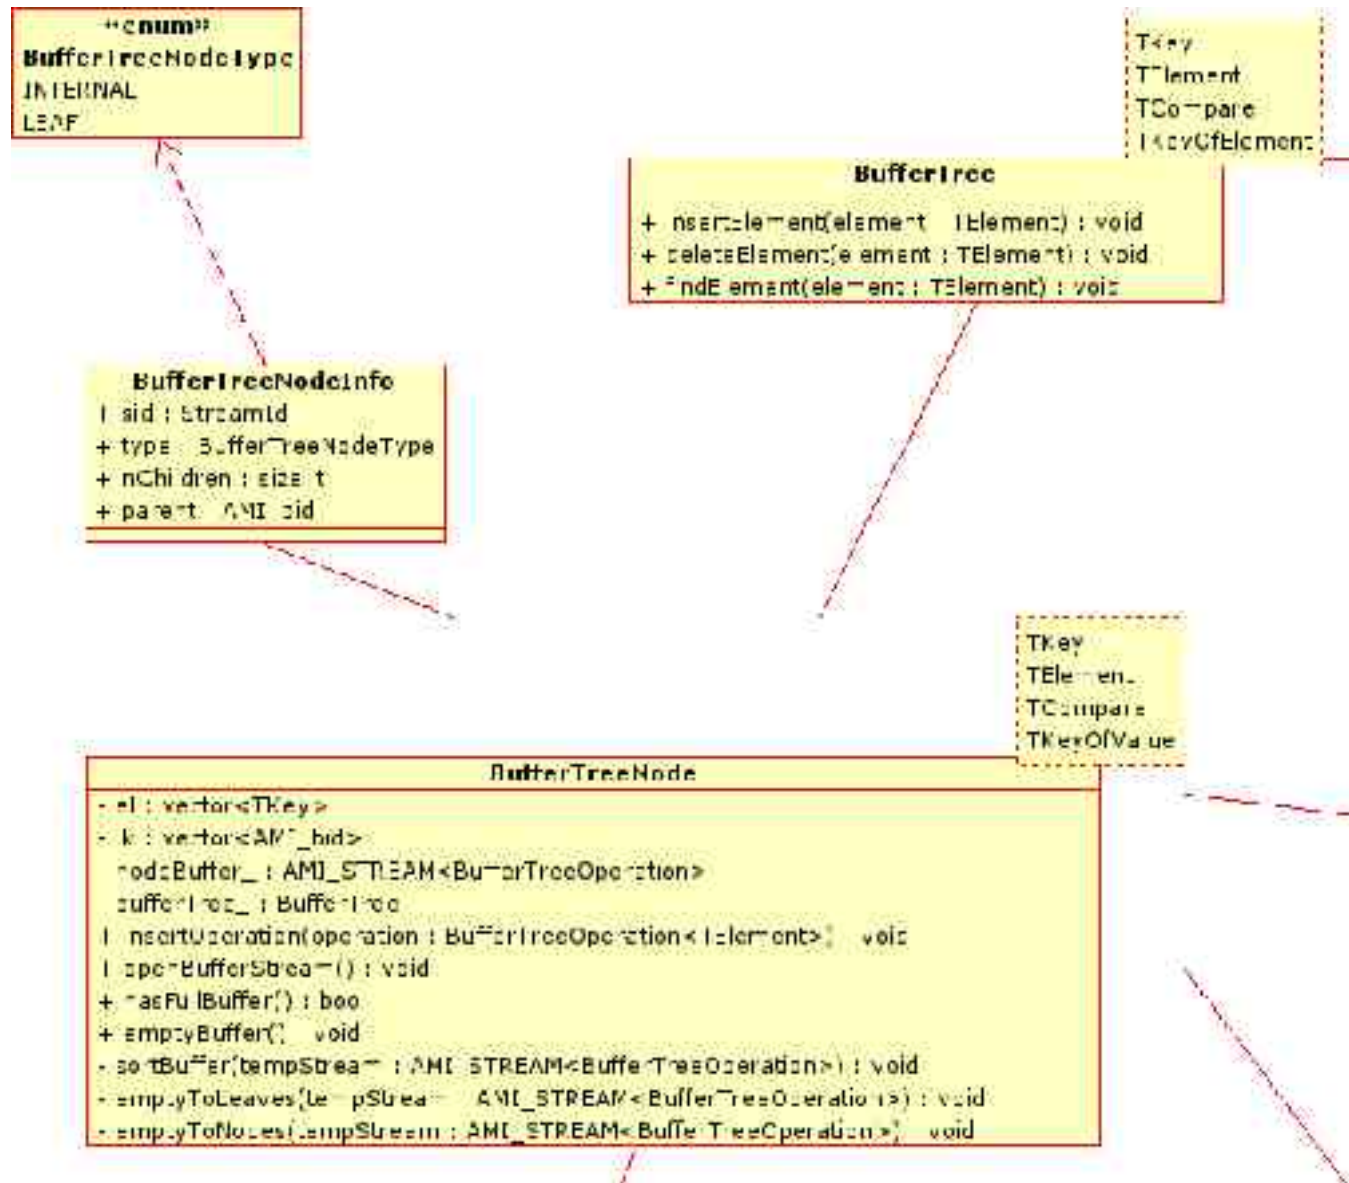

Software Design

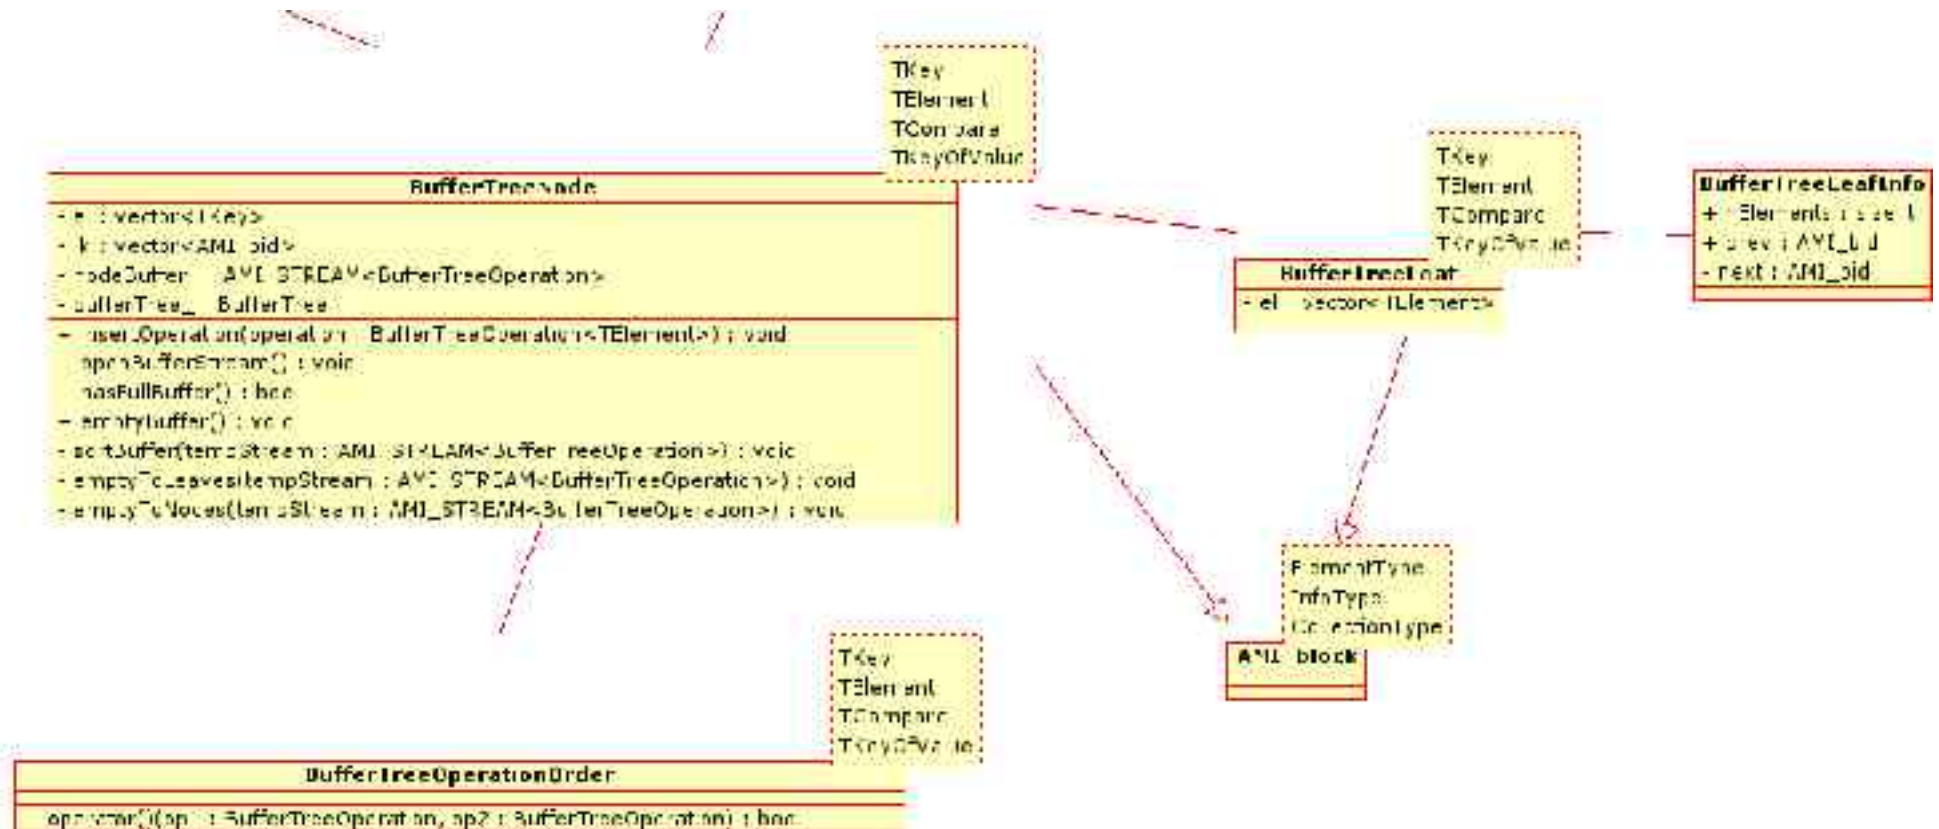

Software Design (BufferTree)

Software Design (BufferTreeNode)

Software Design (BufferTreeLeaf)

External Memory Representation

- ◆ Nodes and leaves are stored in collections
- ◆ Buffers are Streams
- ◆ Nodes link to nodes or leaves and buffers

Guide

- ◆ Summary Buffer Tree
- ◆ Software Platform & Design
 - ◆ Software Design and Tree Representation
 - ◆ Tree Representation in External Memory
 - ◆ Implementation Details
- ◆ Evaluation
- ◆ Notes

Implementation Details (sortBuffer)

- ◆ Read M operations from the buffer in memory
- ◆ Sort this list by defined order in-memory
- ◆ Merge list with rest of buffer into temporary stream
- ◆ Truncate operation buffer

Implementation Details (emptyToNodes)

- ◆ Scan temporary stream and merge with operation buffers of children nodes according to splitter keys
- ◆ Remove current node from memory
- ◆ Recursively empty buffer on child nodes where operation buffer $> M$

Implementation Details

(emptyToLeaves)

- ◆ Scan temporary stream and merge with element lists from all leaves
- ◆ Distribute resulting list to exiting leaves
- ◆ Add one leaf at a time and rebalance

Guide

- ◆ Summary Buffer Tree
- ◆ Software Platform & Design
 - ◆ Software Design and Tree Representation
 - ◆ Tree Representation in External Memory
 - ◆ Implementation Details
- ◆ Evaluation
- ◆ Notes

Evaluation Results

?

Evaluation Plans

- ◆ Variation of available main memory
- ◆ Variation of leaf block size
- ◆ Impact of Tuning
- ◆ Caching?

Guide

- ◆ Summary Buffer Tree
- ◆ Software Platform & Design
 - ◆ Software Design and Tree Representation
 - ◆ Tree Representation in External Memory
 - ◆ Implementation Details
- ◆ Evaluation
- ◆ Notes

Notes

Difficulties:

- ◆ Determination of Parameters
- ◆ Real-world program vs. theoretical program
- ◆ Program complexity due to templates

Ende
